

MASTERCLASS

Cortex AI + Snowflake ~~Intelligence~~

CoWork

2026

Cortex AI is Easy, Connected, Trusted

Today's Agenda

5-10 mins: **Getting everyone connected**

5 mins: [Advanced Questions](#)

30 mins: **The Cortex Umbrella**

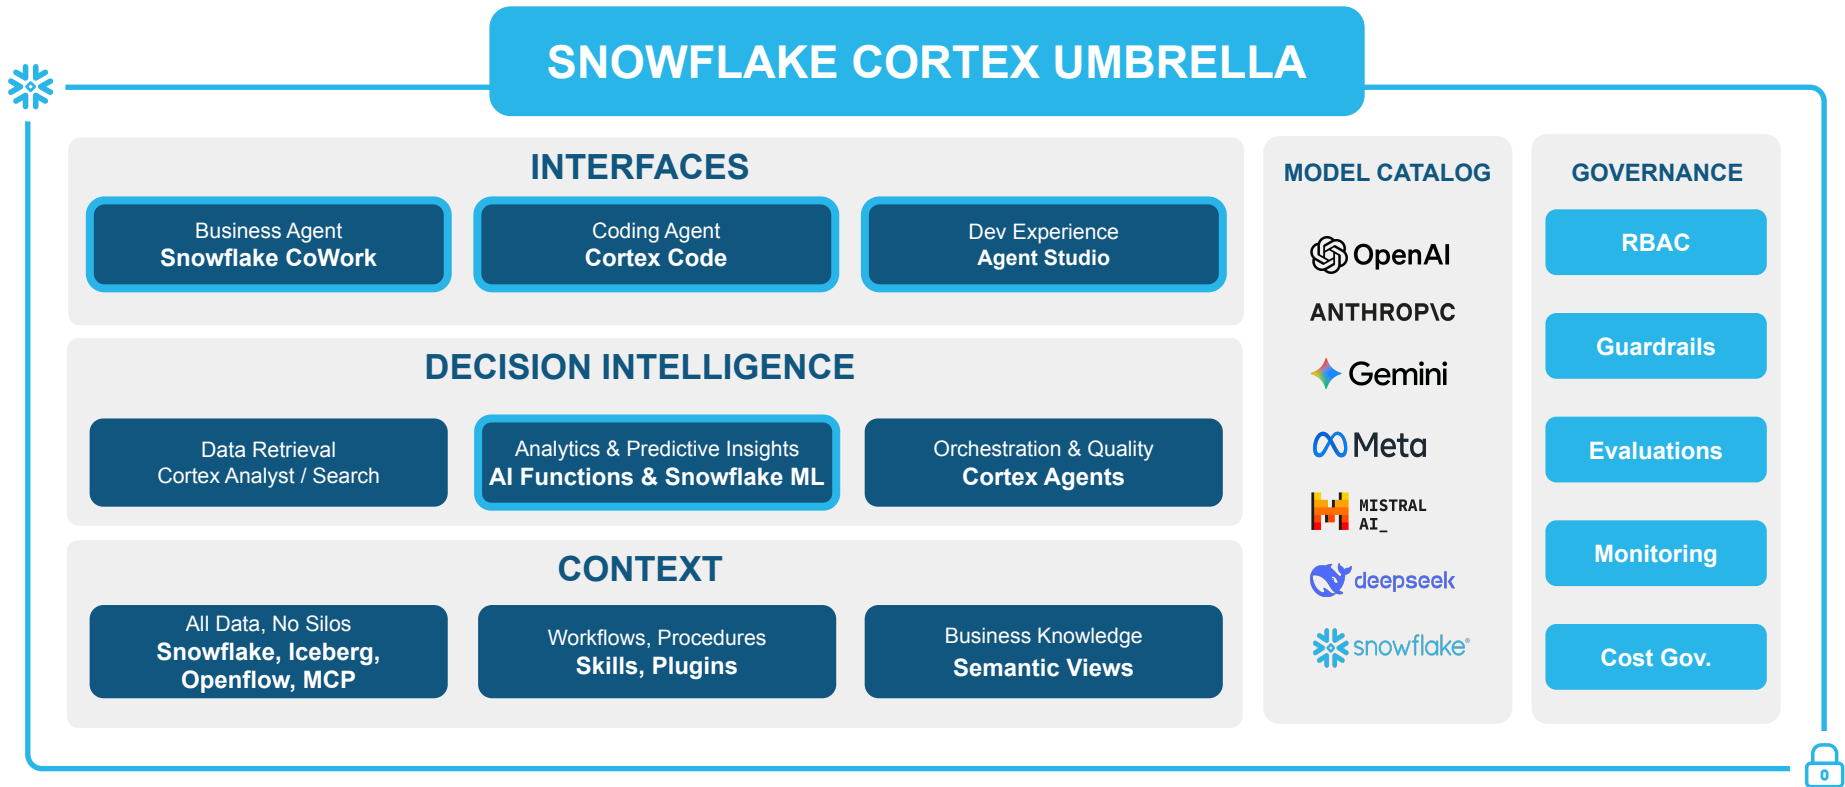

- AI Functions
- Cortex Code
- Agents
- + *More*

5 mins: **Snowflake** [CoWork](#) Overview

30-45 mins: CoWork Hands-On Workshop

Cortex AI is Easy, Connected, Trusted

Cortex AI Functions

AI Meets Analytics Across Multimodal Data

TRADITIONAL APPROACH

Complex Pipelines

STITCHED ARCHITECTURE

AI pipelines are cobbled together across ETL tools, prompt engineering, and external API services.

DATA MOVEMENT

Data must leave the Snowflake security perimeter for processing, increasing risk and latency.

HARD TO GOVERN

Managing RBAC and policies across multiple disjointed systems is nearly impossible.

THE SHIFT

AI-Powered Analytics

Run unstructured analytics at scale with simple SQL operators.
No data movement.

```
-- Customer Interaction Intelligence
WITH transcribed_calls AS (
  SELECT c.call_id, a.account_tier,
         SNOWFLAKE.CORTX.TRANSCRIBE(c.audio_file, 'en') AS transcript
  FROM customer_calls c
  JOIN customer_accounts a ON c.customer_id = a.customer_id
)
SELECT call_id,
       account_tier,
       AI_CLASSIFY(transcript, ['Billing', 'Support', 'Cancellation']) AS topic,
       AI_EXTRACT(transcript, ['issue', 'resolution', 'follow-up']) AS details,
       AI_COMPLETE('claude-4-sonnet',
                  PROMPT('One-sentence summary of this call: {transcript}')) AS summary
FROM transcribed_calls
WHERE account_tier = 'Enterprise';
```

BATCH OPTIMIZED

High-throughput processing at scale

SECURED & GOVERNED

Data never leaves Snowflake perimeter

FLEXIBLE INTERFACE

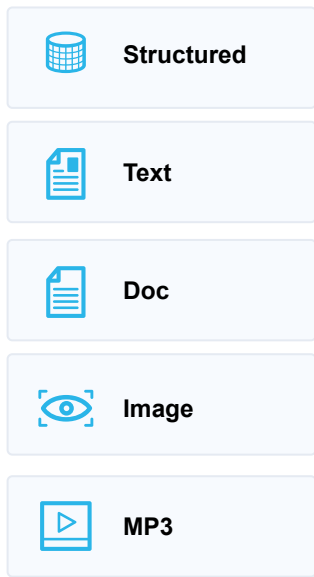

Native SQL & Python support

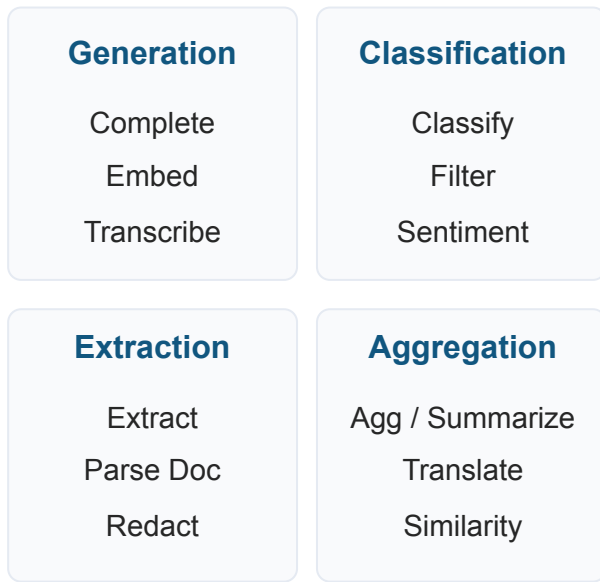

Cortex AI Functions

Key Use Cases and Core Capabilities

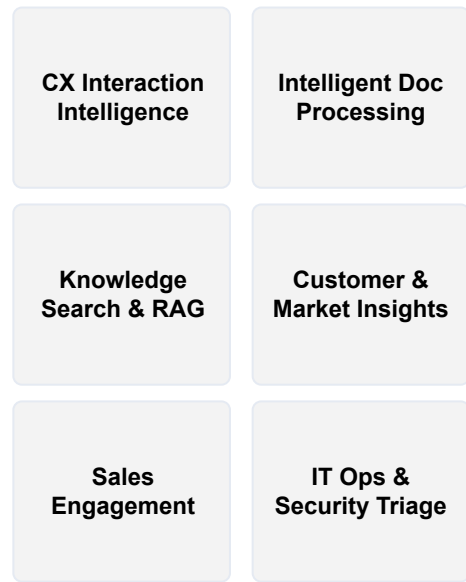

Multimodal Data

Core AI Functions

Enterprise Use Cases

Cortex AI Functions

`AI_COMPLETE -- AI_EXTRACT -- AI_CLASSIFY`

30-Second Demo

- 1. `AI_COMPLETE`: basic LLM Response
- 2. `AI_EXTRACT`: parse unstructured data
- 3. `AI_CLASSIFY`: auto-classification

Accelerate Your Data and AI Workflows

Cortex Code: AI Coding Agent for Data Teams

THE CURRENT STATE

Traditional Dev Friction

FRAGMENTED TOOLCHAIN

Workflows spanning dbt, Airflow, SQL, and Notebooks → constant context switching.

SLOW ITERATION

Manual refactoring and tribal knowledge slow debugging and deployments.

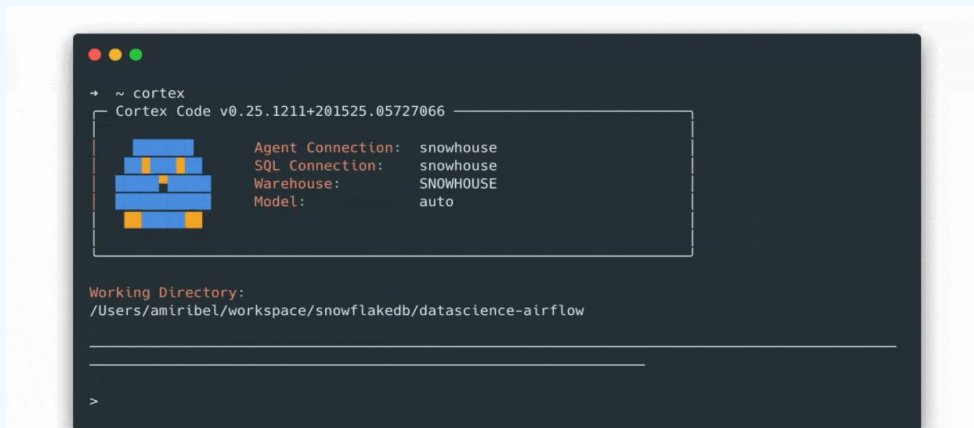

GOVERNANCE FRICTION

Access controls and policies bottleneck rapid prototyping.

THE SOLUTION

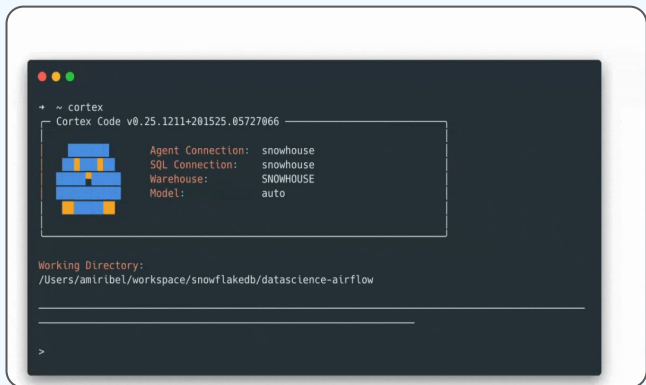

AI-Powered Development

From natural language to production-ready code across your entire data stack.
CLI & in Snowsight.

Cortex Code: AI Coding Agent for Data Teams

CLI

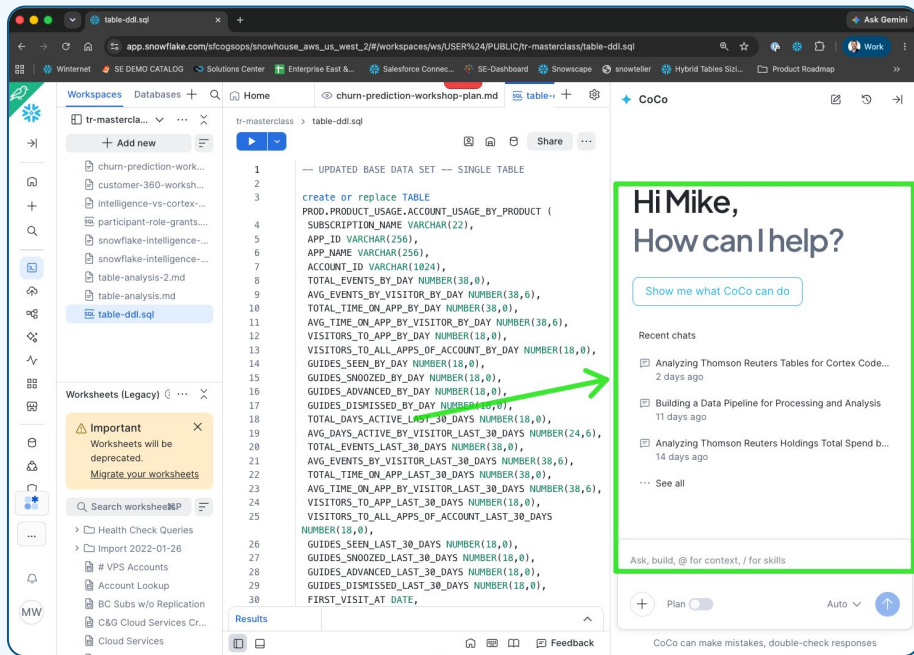

```
+ ~ cortex
Cortex Code v0.25.1211+201525.05727066

Agent Connection: snowhouse
SQL Connection: snowhouse
Warehouse: SNOWHOUSE
Model: auto

Working Directory:
/Users/amiribel/workspace/snowflakedb/datascience-airflow

Cortex AI Ecosystem

Cortex Agents

Multi-step reasoning with tools — orchestrate Cortex Search, Analyst, and custom UDFs in a single call

Tool use

The agent can call Cortex Search, Cortex Analyst, Python UDFs, or external APIs mid-reasoning

Multi-step

Chain → search → reason → extract → decide — each step informed by the last.

Audit trail

Every tool call is logged with inputs, outputs, and timestamps for full reproducibility

Scenario	Use
Single LLM call, fixed prompt	AI_COMPLETE
Extract fields from text	AI_EXTRACT
Search + reason + extract (multi-step)	Cortex Agents
Call external API mid-reasoning	Cortex Agents
NL query over structured data	Cortex Analyst
Tool calls inside a SQL pipeline	AGENT_RUN

Agent Studio

Build enterprise-grade agents with confidence

THE CHALLENGE

Building Enterprise-Grade agents is hard

Agents struggle to grasp **business context** and nuance, leading to irrelevant answers.

Difficulty retrieving **structured instruction** data effectively creates knowledge gaps.

Siloed tools and rigid frameworks prevent interoperability across systems.

No visibility into agent reasoning or tools to measure **performance** quality.

THE SOLUTION

A complete toolkit to build, evaluate, and scale Agents

Semantic Models

Deep business understanding built-in.

High-quality Retrieval

Precise access to structured & unstructured data.

Extensibility & Interoperability

Open standards to connect any tool or model.

Evals & Observability

Full transparency into performance & quality.

Semantic View Autopilot

FAST, HIGH-QUALITY SEMANTIC MODELS

Automatically generate semantic models faster and with higher quality

SMART BUSINESS CONTEXT INGESTION

Seamlessly connect to dashboard sources from BI tools, query history, and metadata to build business-aware semantic models

CONTINUOUS IMPROVEMENT

Learn from real usage, refine models over time, and scale to many models without manual work.

Semantic Model

Metadata

Tables & Relationships

Search Services

Custom Instructions

Verified Queries

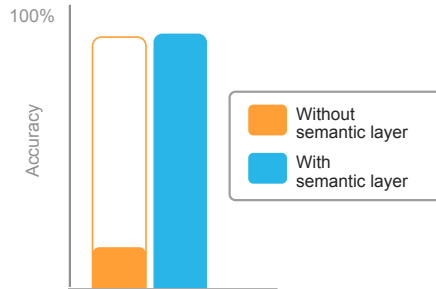

Tableau Data Source

Upload a Tableau data source file to reuse metric and dimension definitions.

Your semantic model just got smarter. See what's new.

Your semantic model has been optimized using the verified queries you submitted. Here's a summary of the improvements we made.

93%

SQL query accuracy (up from 63% before)

We measured accuracy on 27 gold-standard queries after temporarily removing those exact SQL snippets from your model - so this number reflects real gains in descriptions, relationships, and synonyms rather than rote memorization.

189

lines of YAML added (~5 hours of YAML writing you didn't have to do)

41 descriptions, 123 sample values, 58 synonyms and 3 custom instructions.

Snowflake Intelligence ~~CoWork~~

All Your Knowledge. One Trusted Enterprise Agent.

WHAT IS IT

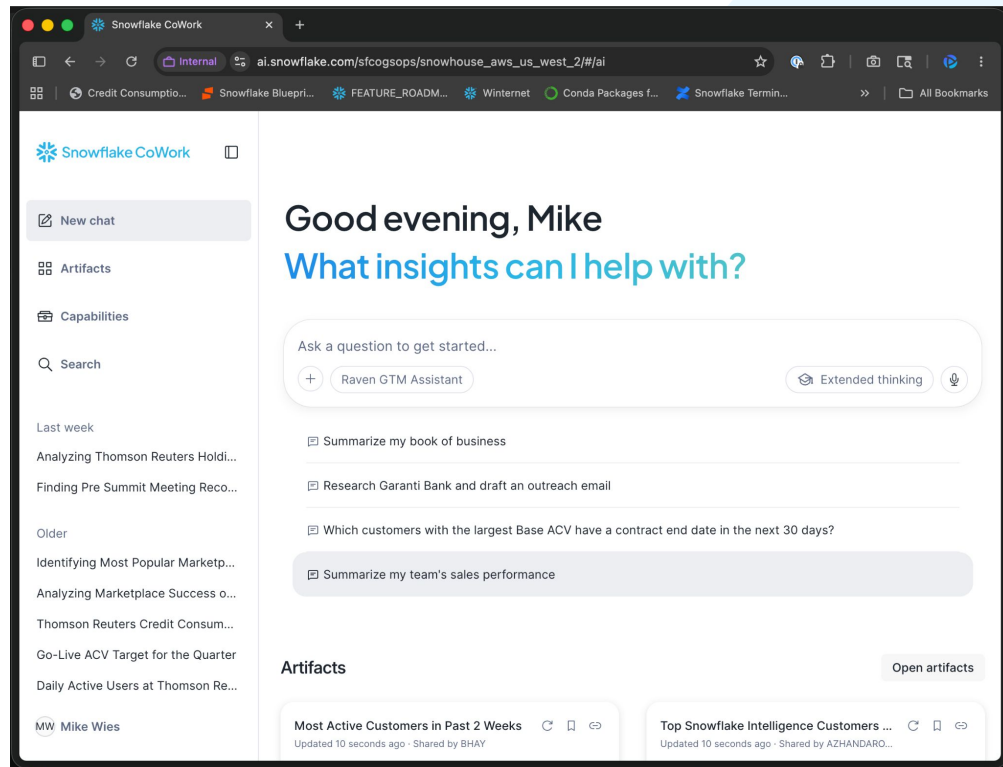

A natural language interface that lets business users query structured and unstructured data with governed insights, no SQL or dashboards needed

WHY USE IT

- Enable business users to self-serve answers across all data
- Unifies structured and unstructured data sources with full security
- Frees up data teams by reducing ad-hoc requests

HOW TO USE IT

- Ask questions in natural language in the UI at <https://ai.snowflake.com>
- Retrieve insights from documents, tables and external sources
- Embed in apps or customize via Cortex Agents

Snowflake **CoWork**: Key Capabilities

Destination for Insights

Democratize Access to Insights

Business User

AI - BI CONVERGENCE

Save, share, and explore live data visuals with built-in enterprise trust

INTELLIGENCE

Deep analysis, anomaly detection, predictive, memory, personalization

PROACTIVE

Suggest follow-up questions, subscriptions / scheduling, timely alerts

Platform for Builders

Scale Impact, Maintain Trust

Builder

SANDBOX & SKILLS

Code sandbox execution, agentic creation, reusable actions & workflows

HOSTED MCP

Bidirectional client & server connection to external systems

EVALS & OBSERVABILITY

Agent observability, evaluation & monitoring

Enterprise Governance

Trusted Answers, Governed Decisions

Admin

BUILT-IN GOVERNANCE

Inherits RBAC, masking & row-level policies, Governed Semantic Layer

SEAMLESS IDENTITY

IdP redirect (Okta/Entra), SCIM provisioning, support for SI-only users

USAGE ATTRIBUTION

Track costs by user, team & agent with budgets

Snowflake CoWork: Hands-On

Instantly Understand Your Subscription Data

Plain English Questions → Deep Insights | No Code
